[2] Measured from differential waveform.

[3] Slew rate is measured through the V_{SWING} voltage range centered around differential 0V. This results in a ±150mV window around differential 0V.

[4] Matching applies to rising edge rate for Clock and falling edge rate for Clock#. It is measured using a ±75mV window centered on the average cross point where Clock rising meets Clock# falling. The median cross point is used to calculate the voltage thresholds the oscilloscope is to use for the edge rate calculations.

[5] V_{CROSS} is defined as voltage where Clock = Clock# measured on a component test board and only applies to the differential rising edge (i.e. Clock rising and Clock# falling).

[6] The total variation of all V_{CROSS} measurements in any particular system. Note that this is a subset of $V_{CROSS-MIN/MAX}$ (V_{CROSS} absolute) allowed. The intent is to limit V_{CROSS} induced modulation by setting Δ-V_{CROSS} to be smaller than V_{CROSS} absolute.

Notes for PCIe Filtered Phase Jitter tables:

[1] Applies to all differential outputs, guaranteed by design and characterization.

[2] Calculated from Clock Jitter Tool, when driven by SMA100B.

[3] Sample size of at least 100K cycles. This figure extrapolates to 108ps pk-pk at 1M cycles for a BER of 1^{-12}.

[4] Additive jitter for RMS values is calculated by solving for b, where [$b = sqrt(c^2 - a^2)$], "a" is rms input jitter and "c" is rms total jitter.

[5] IR is the new name for Separate Reference Independent Spread (SRIS) and Separate Reference no Spread (SRNS) PCIe clock architectures. According to the PCIe Base Specification Rev4.0 version 1.0, the jitter transfer functions and corresponding jitter limits are not defined for the IR clock architecture. The IR filters from the PCIe Base Specification, Rev 3.1a are used to populate this table. There are no accepted filters or limits for IR clock architectures at PCIe Gen1 or Gen4 data rates at the time of publication.

[6] Measured using SMA100B signal source, or equivalent, and a phase noise analyzer.
