***8-Bit Bidirectional Voltage-Level Translator for Open-Drain and Push-Pull Application***

**UM3208H CSP20 2.4×1.9**  
**UM3208QA QFN20 4.5×3.5**  
**UM3208UK TSSOP20**

**General Description**

The UM3208 is 8-channel ESD-protected level translator provides the level shifting necessary to allow data transfer in a multi-voltage system. Externally applied voltages,  $V_{CCB}$  and  $V_{CCA}$ , set the logic levels on either side of the device. A low-voltage logic signal present on the  $V_{CCA}$  side of the device appears as a high-voltage logic signal on the  $V_{CCB}$  side of the device, and vice-versa. The UM3208 bidirectional level translator utilizes a transmission-gate based design to allow data translation in either direction ( $V_{CCA} \leftrightarrow V_{CCB}$ ) on any single data line. The UM3208 accepts  $V_{CCA}$  from +1.65V to +3.6V and  $V_{CCB}$  from +2.3V to +5.5V, making it ideal for data transfer between low-voltage ASICs / PLDs and higher voltage systems.

The UM3208 enters a three-state output mode to reduce supply current when output enable (OE) is low. The UM3208 is designed so that the OE input circuit is supplied by  $V_{CCA}$ . ±6kV ESD protection on the  $V_{CCB}$  side for greater protection in applications that route signals externally.

The UM3208H is available in CSP20 2.4×1.9 bump package and specially features in wafer backside coating process, making the chip more robust. The UM3208UK is available in TSSOP20 package and the UM3208QA is available in QFN20 4.5×3.5 package.

**Applications**

- SPI, MICROWIRE, and I<sup>2</sup>C Level Translation
- Low-Voltage ASIC Level Translation
- Smart Card Readers
- Cell-phone Cradles
- Portable POS Systems
- Portable Communication Devices
- Low-Cost Serial Interfaces
- Cell-Phones
- GPS
- Telecommunications Equipment

**Features**

- Max Data Rates:  
24Mbps(Push Pull),  
2Mbps(Open Drain)
- Bidirectional Level Translation
- 1.65V to 3.6V on A port and 2.3V to 5.5V on B port( $V_{CCA} \leq V_{CCB}$ )
- ±6kV ESD Protection on B port
- Latch-Up Performance Exceeds 100mA
- No Power-Supply Sequencing Required  
 $V_{CCA}$  or  $V_{CCB}$  Can Be Ramped First
- Low Power Consumption

## Pin Description

Pin Name	Function
A1	Input/Output 1. Referenced to V <sub>CCA</sub>
V <sub>CCA</sub>	A-Port supply voltage. $1.65V \leq V_{CCA} \leq 3.6V$ and $V_{CCA} \leq V_{CCB}$
A2	Input/Output 2. Referenced to V <sub>CCA</sub>
A3	Input/Output 3. Referenced to V <sub>CCA</sub>
A4	Input/Output 4. Referenced to V <sub>CCA</sub>
A5	Input/Output 5. Referenced to V <sub>CCA</sub>
A6	Input/Output 6. Referenced to V <sub>CCA</sub>
A7	Input/Output 7. Referenced to V <sub>CCA</sub>
A8	Input/Output 8. Referenced to V <sub>CCA</sub>
OE	3-state output enable. Pull OE low to place all outputs in 3-state mode. Referenced to V <sub>CCA</sub>
GND	Ground
B8	Input/Output 8. Referenced to V <sub>CCB</sub>
B7	Input/Output 7. Referenced to V <sub>CCB</sub>
B6	Input/Output 6. Referenced to V <sub>CCB</sub>
B5	Input/Output 5. Referenced to V <sub>CCB</sub>
B4	Input/Output 4. Referenced to V <sub>CCB</sub>
B3	Input/Output 3. Referenced to V <sub>CCB</sub>
B2	Input/Output 2. Referenced to V <sub>CCB</sub>
V <sub>CCB</sub>	B-Port supply voltage. $2.3V \leq V_{CCB} \leq 5.5V$
B1	Input/Output 1. Referenced to V <sub>CCB</sub>

## Ordering Information

Part Number	Packaging Type	Marking Code	Shipping Qty
UM3208H	CSP20 2.4×1.9	ED8	3000pcs/7Inch Tape & Reel
UM3208UK	TSSOP20	UM3208UK	3000pcs/13Inch Tape & Reel
UM3208QA	QFN20 4.5×3.5	UM3208QA	

**Absolute Maximum Ratings (Note 1)**

Over operating free-air temperature range (unless otherwise noted)

Symbol	Parameter	Value	Unit
V <sub>CCA</sub>	Supply Voltage Range	-0.5 to +4.5	V
V <sub>CCB</sub>	Supply Voltage Range	-0.5 to +6.5	V
V <sub>I</sub>	Input Voltage Range	A ports	-0.5 to +4.5
		B ports	-0.5 to +6.5
V <sub>O</sub>	Voltage Range applied to any output in the high-impedance or power-off state	A ports	-0.5 to +4.5
		B ports	-0.5 to +6.5
V <sub>O</sub>	Voltage Range applied to any output in the high or low state (Note 2)	A ports	-0.5 to ( V <sub>CCA</sub> +0.5)
		B ports	-0.5 to ( V <sub>CCB</sub> +0.5)
I <sub>IK</sub>	Input Clamp Current	V <sub>I</sub> <0	-50
I <sub>OK</sub>	Output Clamp Current	V <sub>O</sub> <0	-50
I <sub>O</sub>	Continuous Output Current		±50
	Continuous Current through V <sub>CCA</sub> , V <sub>CCB</sub> , or GND		±100
T <sub>OP</sub>	Operating Temperature Range	-40 to +85	°C
T <sub>J</sub>	Junction Temperature	-40 to +165	°C
T <sub>STG</sub>	Storage Temperature Range	-65 to +150	°C

Note1. Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

Note2. The value of V<sub>CCA</sub> and V<sub>CCB</sub> are provided in the recommended operating conditions table.

**Recommended Operating Conditions (Note 1, 2)**

Symbol	Parameter	V <sub>CCA</sub>	V <sub>CCB</sub>	Min	Max	Unit
V <sub>CCA</sub>	Supply Voltage			1.65	3.6	V
V <sub>CCB</sub>				2.3	5.5	V
V <sub>IH</sub>	High Level Input Voltage	A- Port	1.65V to 1.95V 2.3V to 3.6V	2.3V to 5.5V	V <sub>CCI</sub> -0.2	V <sub>CCI</sub>
					V <sub>CCI</sub> -0.4	V <sub>CCI</sub>
		B- Port	1.65V to 3.6V	2.3V to 5.5V	V <sub>CCI</sub> -0.4	V <sub>CCI</sub>
		OE			V <sub>CCA</sub> ×0.65	5.5
V <sub>IL</sub>	Low Level Input Voltage	A- Port	1.65V to 3.6V	2.3V to 5.5V	0	0.15
		B- Port			0	0.15
		OE			0	V <sub>CCA</sub> ×0.35
Δt/Δv	Input Transition Rise or Fall Time	A-Port push-pull driving	1.65V to 3.6V	2.3V to 5.5V		10
		B-Port push-pull driving				10
		Control input				10

Note1. V<sub>CCI</sub> is the supply voltage associated with the input port.

Note2. V<sub>CCA</sub> must be less than or equal to V<sub>CCB</sub> and must not exceed 3.6 V.

**Thermal Information**

## Applications Information

The UM3208 can be used in level-translation applications for interfacing devices or systems operating at different interface voltages with one another. The UM3208 is ideal for use in application where an open-drain driver is connected to the data I/Os. The UM3208 can also be used in applications where a push-pull driver is connected to the data I/Os, but the UM3308 is better choice for push-pull applications.

## Block Diagram

The UM3208 (block diagram see Figure 1) does not require a direction-control signal to control the direction of data flow from A to B or from B to A. Each A-port I/O has an internal 10-k $\Omega$  pull-up resistor to  $V_{CCA}$ , and each B-port I/O has an internal 10-k $\Omega$  pull-up resistor to  $V_{CCB}$ . During a rising edge, the one-shot turns on the PMOS transistors (PU1, PU2) for a short duration, which speeds up the low-to-high transition.

**Figure 1 Block Diagram of UM3208 I/O Cell**

## Input Driver Requirements

The fall time ( $t_{fA}$ ,  $t_{fB}$ ) of a signal depends on the output impedance of the external device driving the data I/Os of the UM3208. Similarly, the  $t_{PHL}$  and the maximum data rates also depend on the output impedance of the external driver. The values for  $t_{fA}$ ,  $t_{fB}$ ,  $t_{PHL}$ , and the maximum data rates in the data sheet assume that the output impedance of the external driver is less than 50 $\Omega$ .

## Power Up

During operation, ensure that  $V_{CCA} \leq V_{CCB}$  at all times. During power-up sequencing,  $V_{CCA} \geq V_{CCB}$  does not damage the device, so any power supply can be ramped up first.

## Enable and Disable

The UM3208 has an OE input that is used to disable the device by setting OE = low, which places all I/Os in the high-impedance (Hi-Z) state. The disable time ( $t_{dis}$ ) indicates the delay between the time when OE goes low and when the outputs actually get disabled (Hi-Z). The enable time ( $t_{en}$ ) indicates the amount of time the user must allow for the one-shot circuitry to become operational after OE is taken high.

## Pull-up or Pull-down Resistors on I/O Lines

Each A-port I/O has an internal 10-kΩ pull-up resistor to  $V_{CCA}$ , and each B-port I/O has an internal 10-kΩ pull-up resistor to  $V_{CCB}$ . If a smaller value of pull-up resistor is required, an external resistor must be added from the I/O to  $V_{CCA}$  or  $V_{CCB}$  (in parallel with the internal 10-kΩ resistor).

## Test Circuits

- A.  $C_L$  includes probe and jig capacitances.
- B. Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control.  
Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics:  $PRR \leq 100\text{MHz}$ ,  $Z_0 = 50\Omega$ ,  $dv/dt \geq 1\text{V/ns}$ .
- D. The outputs are measured one at a time, with one transition per measurement.
- E.  $T_{PLZ}$  and  $T_{PHZ}$  are the same as  $t_{dis}$ .
- F.  $T_{PZL}$  and  $T_{PZH}$  are the same as  $t_{en}$ .
- G.  $T_{PLH}$  and  $T_{PHL}$  are the same as  $t_{pd}$ .
- H.  $V_{CCi}$  is the  $V_{CC}$  associated with the input port.
- I.  $V_{CCO}$  is the  $V_{CC}$  associated with the output port.
- J. All parameters and waveforms are not applicable to all devices.

## **GREEN COMPLIANCE**

Union Semiconductor is committed to environmental excellence in all aspects of its operations including meeting or exceeding regulatory requirements with respect to the use of hazardous substances. Numerous successful programs have been implemented to reduce the use of hazardous substances and/or emissions.

All Union components are compliant with the RoHS directive, which helps to support customers in their compliance with environmental directives. For more green compliance information, please visit:
